*[Review the informed consent document together and get consent for participation and requests
RE: audio recording]*

Intros

- Names + the kinds of research studies you have participated in

On Research Promises and Responsibilities

- What promises have been made to you about research? What have you been told by researchers?
- What do you believe a researcher's responsibilities are?
- What do you think are the responsibilities for those who participate in research?
- How would you want research to come back to you?
- What kinds of research would you want to see? If you would do the research yourselves, what would you want to better understand/study?

On Participation and Sharing

- Why have you agreed to participate in research projects in the past?
- Will you agree to participate again in the future? Why/why not?

Data Context and Availability

- In your experience, what are some of the most common research topics done about Kibera?
- What else do you think people need to know about this place and why?
- How could we study that?
- Do you have any experience/frustration with data being collected and not going anywhere or being duplicated?

- How do you feel about anonymized research data collected about you being made available to...
 - You
 - Your community libraries
 - Kenya's research community
 - International research groups
 - Anyone who can access it online

- What problems or worries might you have with public availability of research data?

Thank you so much for your time!

[Finish informed consent requests regarding data storage and sharing and obtain signature]

[Review all data requests. If they all approved for the data to be shared in PECE:] I will share the resulting audio and transcript with you by email.

Guide for myself for post interview reflections and fieldnotes:

- Did the respondents use of the term “data” change throughout the duration of the interview? Did their use of “open” change over time?
- What other concepts did they rely on heavily throughout the interview? What terms did they use the most?
- Are there people that were mentioned that I should follow-up with? Organizations? Events (future or past)? Places? Laws? Funders? Technologies?
- How did this person characterize the data ecosystem/infrastructure/communities in Nairobi? What adjectives were used? Were they optimistic/angry/what kind of emotional response to the discussion?
- Anything unusual from the other interviews / noteworthy? Any particular triggering questions? Any additional questions I should add or remove?
- What kinds of training did this person have?
- How does the physical geography and built environment of Nairobi influence the movement of data?
